Getting Started with Your New Model 1300-series Utility Scanner

If this is your first 1300-series scanner, congratulations and welcome to the family. Here's everything you need to know to start using your new scanner.

Your scanner comes out of the box fully equipped with a nonreplaceable battery already installed for your convenience. It is water resistant and functional in temperatures as low as -50°C and atmospheric pressures as low 10 kPa, so it will be suitable for all of your shipboard maintenance needs. If you require a scanner certified for EVA usage, please consider our 2300-series.

To use your 1300-series utility scanner, simply hold or carry it and speak a supported command. Your scanner will reply with the answer, or one of its full range of available error messages. Please see the table below for a list of commands supported by your 1300-series scanner.

Command	Function
scanner, help	Your scanner will provide a list of supported commands.
scanner, scan <i>machine</i>	Your scanner will report the status of a supported machine or component module. Exact information available depends on the features of the machine or module.
scanner, repair <i>machine</i>	Your scanner will interface with available maintenance bots to schedule repairs of the affected machine. [†]

[†] feature not supported in 1345 value model

Did you know?

Your 1300-series scanner can also scan component modules. Get a jump on maintaining your failed modules by scanning them in the field!
